

# CODEZEN 2026

## MedConnect

–Bridging Patients and Safe  
Prescriptions.

**Project Name: MedConnect**

**Team Name: Let's Debug it**

**Team Members: Karan Sharma**

**Tracks Chosen: Healthcare**

# PROBLEM STATEMENT

## Disconnectivity in Health Care System

### **Fragmented Data:**

Data on Internet is very scattered due to lack of comprehensive interoperable digital systems.

### **Medication Mistakes:**

FDA reviews about 1,400 reports of medication errors per month (approximately 16,800+ annually).

The most common errors included wrong drug (30%), wrong strength (26%), and wrong directions (15%).

# SOLUTION

## #MedConnect

### **Accurate Information:**

Providing user with right information and with good suggestions through blogs.

### **Managing complex medication schedules:**

Providing user with proper managing system of scheduling there doses.

### **Medicine information:**

Providing user with vital information about there medicine.

## KEY FEATURES

- **Swasthya Jagarukta:** This feature provide Medicine Scheduling, Smart Notifications, Missed Dose Tracker, Multiple Reminder, User-Friendly Interface.
- **Aarogya Mitra:** This Mitra(friend) is a blog post in our project where we share some authentic and accurate information from official government websites which is helpful for everyone.

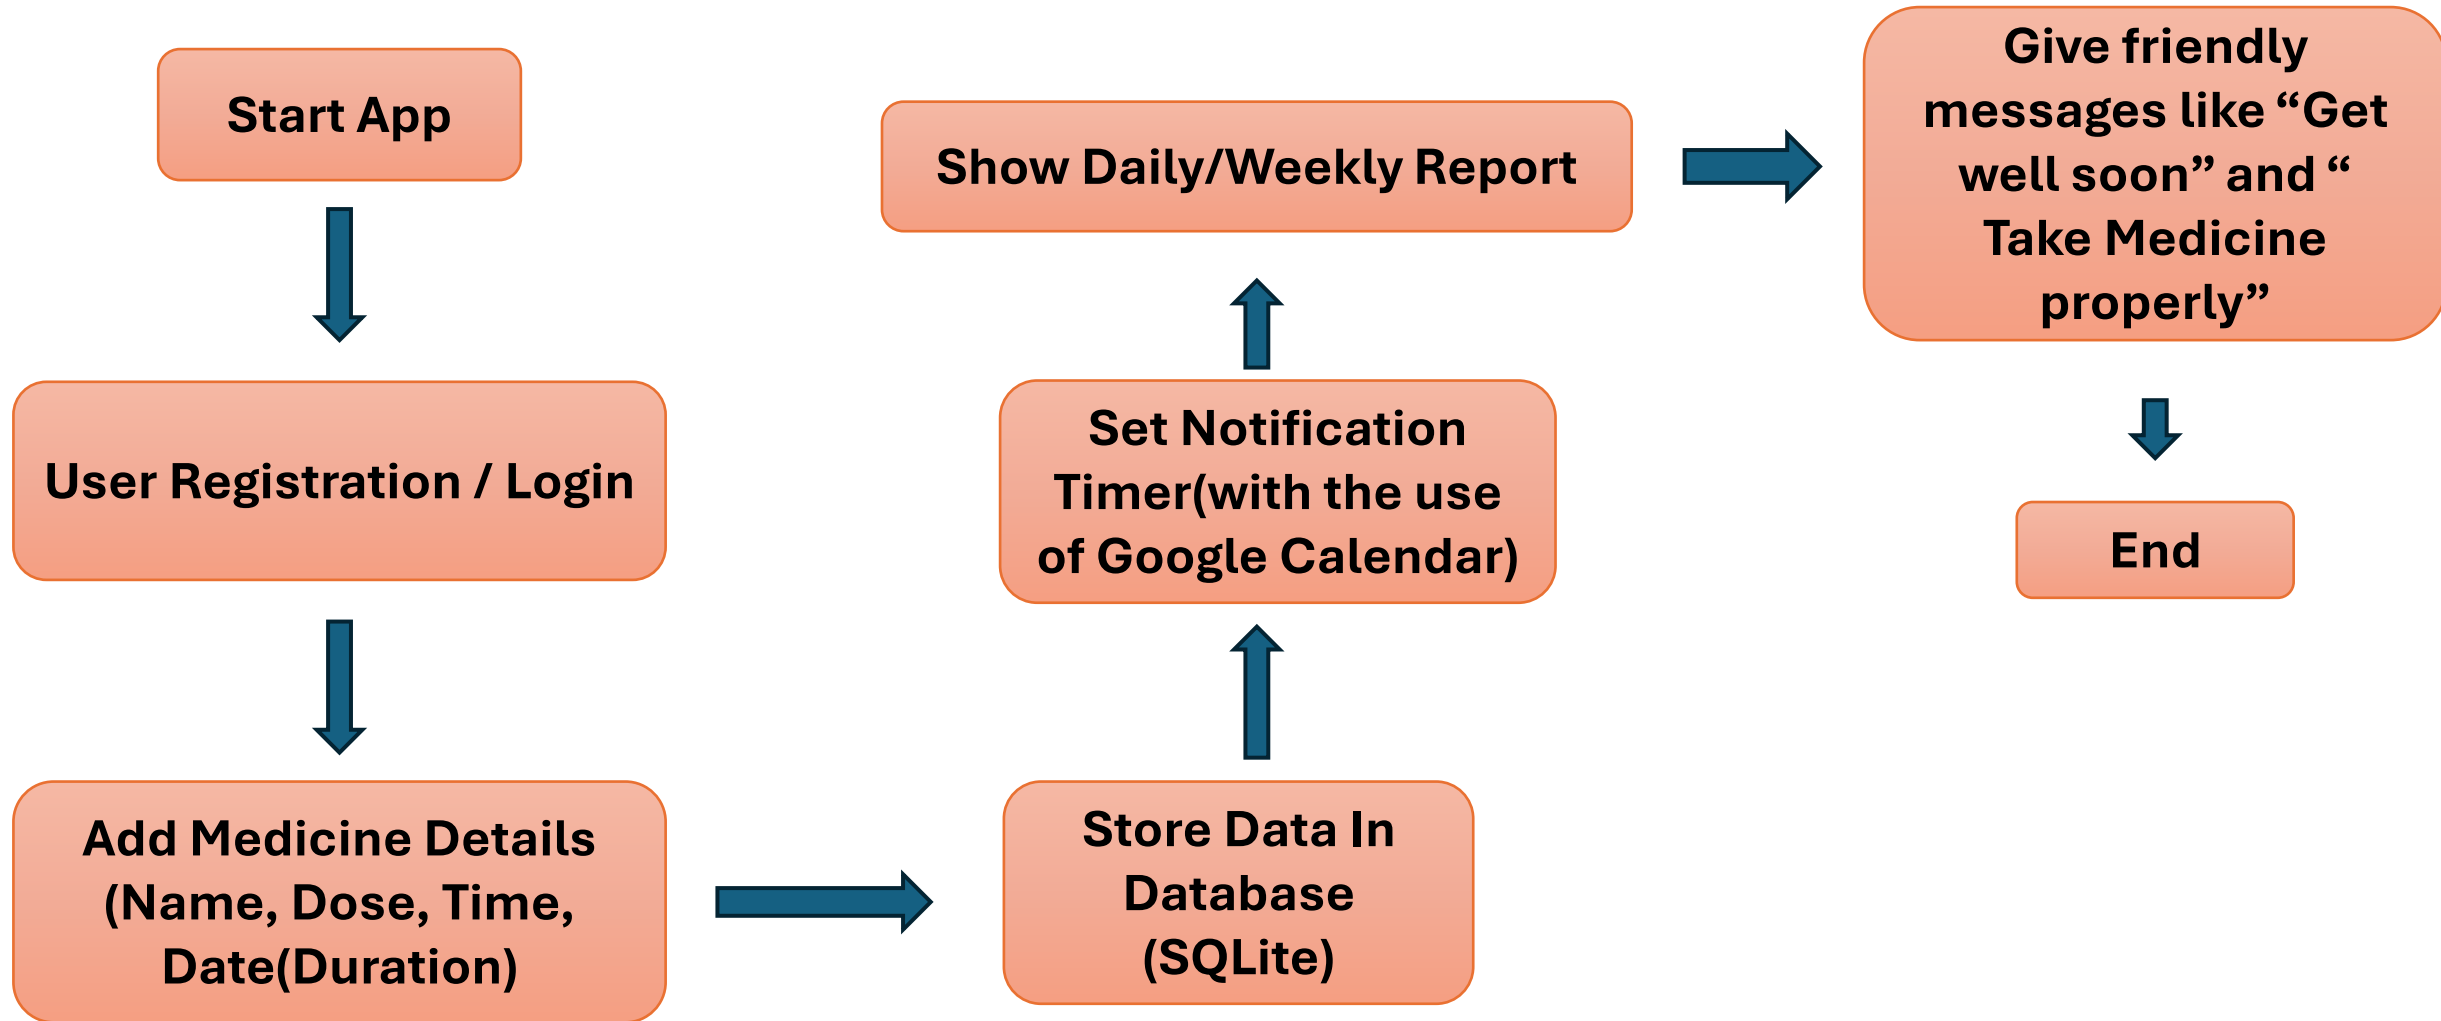

## Why It's Different

- One Single Platform form Medicine Scheduling, Providing vital information about correct dose for different stages.

## Target Users

Target Audience is people who have more complex medicine scheduling (**old aged people**) and as they often live with family this application help there **Caretakers** and for **Health Conscious** people.

# Idea/Approach

# TECHNOLOGY STACK

**FRONTEND**      HTML,CSS,JavaScript

**Backend**      Node.js and Express.js

**Notification**      Google Calendar API

**Database**      SQLite

## ———— Feasibility and Showstoppers ————

- The Tech Stack we are using is highly feasible to build project within time limit.
- **Swasthya Jagarukta and Aarogya Mitra** are showstoppers. These features are quite helpful for users.

## ———— USP & BUSINESS MODEL ————

- USP is its Managing complex medication schedules and guide them that they aren't taking wrong dose of medicines.
- This can be created as **B2C** where we interact directly with customers and sell them premium application with some more **future advancements** like daily protein trackers and daily calories intake.

———— This is software focused ————
